## DIRECTIONS TO CREATE PLANT GEL IN DIFFERENT COLORS:

1. Pour 1 gallon of *Distilled* water into a large bowl or container (**Use Distilled water only**).
2. Add 2 tablespoons of PLANT GEL crystals to the water and let it sit for at least 4 to 5 hours. The crystals will slowly absorb the water. 2 Tablespoons make 1 gallon of gel.
3. Pour the wet PLANT GEL into a strainer to remove excess water and let stand for at least 2 hours.
4. Pour the PLANT GEL from the strainer into a bowl for mixing.
5. Add PLANT COLORING (Food Coloring or Icing Gels) one drop at a time and stir with a spoon to mix it in, until you get the color you want. **\*\*Do not add too much color, or the gel will start to smell after a while.\*\*** **Make light colors, not dark colors.**

You can use any food coloring or icing gels used to make cakes. All supermarkets carry them. Icing gels come in small round jars for about 1 dollar each. They are in the baking section of the supermarket.

### **If you want to dehydrate the gel into colored crystals:**

Once you color the gel, pour it onto something like a cookie sheet and let the water dry out. Leave it sitting out until completely dry. This will take a few weeks. Once it dries into a crystal. You can package and sell it.
